Likely Routes of Exposure: Eyes, skin, inhalation and ingestion

Most important symptoms and effects, both acute and delayed:

May cause serious eye damage, may irritate skin; may irritate airways with overexposure; possible results producing headache, blurry vision, dizziness and other effects on specific organs or body areas as listed below. Harmful if swallowed; ingestion would likely cause digestive tract irritation.

Acute Health Hazard Symptoms:

Eyes: May cause irritation, burns, tearing, blurry vision, discomfort.  
Skin: May cause irritation, blurry vision, dermatitis, rash, discomfort.  
Ingestion and Inhalation: Irritation of digestive tract, gastric and intestinal disturbances, nausea vomiting, pain, diarrhea. May cause irritation (nose, throat, airways), central nervous system (CNS) depression, blurry vision, unconsciousness, coughing, discomfort, headache, dizziness, drowsiness.

Acute Health Hazards: Skin, eyes and respiratory irritant; CNS depressant.

Chronic Effects: One or more components have shown central nervous system depression (CNS) effects; one component gave developmental and decreased male fertility effects.
